Scenario 1

AccenSports

Perform Automation Testing on Players Registration & Buy Tickets Module

Overview of AccenSportz

AccenSportz application will be thoroughly tested by referring identified use cases based on application features such as **Player Registration**, **Fantasy Sports** and **Book Tickets**.

1.1 Requirement

Read below Requirement:

Player Registration - This feature will allow user to register for the application to use AccenSportz other features.

For ex: User can book the tickets, use play, coaching, merchandise functionalities etc.

You have been assigned as Automation Test Engineer and your requirement is to automate the Player Registration Module using Playwright, POM, Data Driven & BDD using CucumberJS

1.2 Prerequisites

Participants must know about the following features

- VS Code
- Cucumber
- Playwright

1.3 Steps

- 1) Identify the from AccenSports <https://lkmdemoaut.accenture.com/AccenSportz/#/>
- 2) Create a Project and add all the npm packages with are associated:
 - a. Playwright
 - b. Cucumber
 - c. JSON Reader

[Note: Maintain the project setup and use proper packages]

- 3) Create BDD Cucumber feature file for Player Registration and Buy Tickets Modules.
[Note: Two separate feature files need to be created.]
- 4) Implement POM to store all the WebElements. [Note: Two PF needs to be created one for Register & one for Buy Tickets]
- 5) Generate Step Definition using Runner File
- 6) Implement Playwright Code via POM in Step Definition. [Note: Ensure using good programming practices like naming convention, comments, indentation, Line of Code, etc.]
- 7) Implement Data Driven Testing
- 8) Project Closure.

Scenario 2

AccenSportsAPI

Perform Automation Testing on Player Registration & Game Category

Overview of AccenSportzAPI

Welcome to the AccenSportz Microservice Application, offering a comprehensive platform for managing sports data. With intuitive endpoints and robust functionality, the application covers all REST API method types. Users can effortlessly create, retrieve, update, and analyze sports data, staying informed and engaged. We offer access to a wide array of game categories.

Emphasizing security, our APIs support authentication using username and password, as well as authorization using Bearer Token and OAuth 2.0., ensuring robust protection of resources.

2.1 Requirement

Read below Requirement:

Player Registration - This feature will allow user to add, update, delete or view players

You have been assigned as Automation Test Engineer and your requirement is to automate the Player Registration Module using Playwright , Data Driven & BDD using CucumberJS

1.2 Prerequisites

Participants must know about the following features

- VS Code
- Cucumber
- Playwright

1.3 Steps

- 1) Identify the from AccenSportsAPI
<https://lkmdemoaut.accenture.com/AccenSportzRestApi>
- 2) Create a Project and add all the npm packages with are associated:
 - a. Playwright
 - b. Cucumber
 - c. JSON Reader

[Note: Maintain the project setup and use proper packages]

- 3) Create BDD Cucumber feature file for Player Registration and Games Categories Modules. [Note: Two separate feature files need to be created.]
- 4) Generate Step Definition using Runner File
- 5) Implement Playwright Code via POM in Step Definition. [Note: Ensure using good programming practices like naming convention, comments, indentation, Line of Code, etc.]
- 6) Implement Data Driven Testing
- 7) Project Closure.
